#### **DETAILED ACTION**

## Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970);and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-4, 6, 11, 13 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-4, 7, 10 & 12 of U.S. Patent No. 6,131,514 in view of Matzinger (# US 6025022).

Although the conflicting claims are not identical, they are not patentably distinct from each other because the subject matter claimed in the instant application is disclosed in the US Patent and is covered by the US Patent, except that the aqueous solution or aqueous colloidal dispersion of polymer includes pigment particle therein.

However, the Matzinger reference teaches that to get the wet-rub resistance and accent marker resistant print quality, the composition for preparing lithographic plate (column: 5, line: 19-36) includes the aqueous solution or aqueous colloidal dispersion of polymer includes pigment particle therein (column: 6, line: 45-50).

Application/Control Number: 10/628,639 Page 3

Art Unit: 2853

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the composition of US Patent # 6131514 by the aforementioned teaching of Matzinger in order to have a wet-rub resistance, and accent marker resistance print quality.

### Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Simons (# US 6131514) in view of Matzinger (# US 6025022).

Simons discloses a method of preparing a printing plate including inkjet printing an oleophilic image on a surface of a support by applying to the support an aqueous solution or aqueous colloidal dispersion of a polymer having water-solubilising groups, wherein the water-solubilising groups interact with the support surface, thereby binding the polymer to the support surface and rendering the polymer insoluble (column: 1, line: 45-55); wherein the water solubilising groups are ionisable acid group, which is selected from the group consisting of carboxylic acid and sulfonic acid groups (column: 2, line: 15-24). They also disclose that the polymer is selected from polyester or sulfonated

Art Unit: 2853

polyester and polymer prepared by polymerization of ethylenically unsaturated monomers (column: 2, line: 45-55; column: 6, line: 15-20). They also disclose that the polymer is present in an aqueous solution or aqueous colloidal dispersion in the range 0.02 to 5% by weight (column: 6, line: 25-30). They also disclose that the support is selected from metallic surface or polymeric sheet or foil, and more preferably support is metallic and has an oxidized surface (column: 2, line: 25-35). They also disclose that the support is coated with hydrophilic layer of a polymer (column: 2, line: 25-30).

Simons differs from the claim of the present invention in that (1) the aqueous solution or aqueous colloidal dispersion of polymer includes pigment particle therein. (2) The pigment is selected from carbon black, C.I. Pigment Red 122 with the particle size of 10 to 100 nm, and pigment is present in an amount from 0.1 to 10% by weight.

Matzinger teaches that to get the wet-rub resistance and accent marker resistant print quality, the composition for preparing lithographic plate (column: 5, line: 19-36) includes the aqueous solution or aqueous colloidal dispersion of polymer includes pigment particle therein (column: 6, line: 45-50), wherein the pigment is selected from carbon black, C.I. Pigment Red 122 (column: 7, line: 1-5) with the particle size of 0.01 micron to 5 micron (10 to 5000 nm) (column: 6, line: 55-58), and pigment is present in an amount from 1 to 20% by weight (column: 6, line: 60-62).

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the composition of Simons by the aforementioned teaching of Matzinger in order to have a wet-rub resistance, and accent marker resistance print quality.

#### Conclusion

Page 5

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Manish S. Shah whose telephone number is (571) 272-2152. The examiner can normally be reached on 7:00am-3:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stephen D. Meier can be reached on (571) 272-2149. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have guestions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
